-> Sensors are designed to monitor specific environmental conditions. 'Digital' sensors provide real-time values while 'Switch' sensors monitor a change in state from normal to alert conditions. Maximum sensor cable length is 100 feet (i.e. 33 meters) for 'Digital' sensors and 900 feet (i.e. 300 meters) for 'Switch' sensors. AVTECH recommends using AVTECH's digital sensors with extended length cables instead of using couplers to extend cable length for 'Digital' sensors. For 'Switch' sensors, use a standard 2-wire or speaker cable. DO NOT use RJ-45 cable or connect sensors directly to your network. NC = Normally Closed; NO = Normally Open.
